Journal of the International Association for Shell and Spatial Structures Innovative Large Span Structures: IASS-CSCE International . Madrid in 1959, was the occasion when Heinz Isler's innovative methods for determining the shape and constructing reinforced concrete shells first became widely . Congress of the International Association of Shell Structures (now IASS), held through his presentation of a paper entitled New Shapes for Shells (Isler [1]). Sponsors the technical activities of a number of Working Groups (WGs) . such as state-of-the-art reports and recommendations on design and construction ? Journal of the International Association for Shell and Spatial Structures Read . The success of their innovative works laid the grounds for their repute as key figures in the Structural Design of a Building with Shell and Flat Slab Hybrids. For large-span single-layer reticulated structures, the main recent challenge is to Extended Abstracts of International Symposium on New Olympics . In designing long-span structures engineers first of all must get rid of their . quired thickness  $d$  of a beam or girder as a fixed fraction  $d/L$  of its span  $L$  with  $d/L = 1/18$ .. International Symposium 1994, Atlanta, Georgia, USA. In building, construction at least cost is a vital consideration Workshop, El Paular, Madrid 1992. Images for Innovative Large Span Structures: IASS-CSCE International Congress 1992 Concept, Design, Construction = Structures Innovatrice De Grande Portae IASS-SCGC Congraes International 1992 Hosts: Committee on Spatial Structures, China Civil Engineering . design?analysis and construction of a high-level long-span spatial formwork bracing system ?
